ALL-AMERICA SELECTIONS

1947

ALL the "All America Selections" introduced since 1933 are grouped here. They represent the newest developments in flowers, the latest fashions. In making these your choice, you are assured of having selected the best for your garden.

HERE IS HOW THE "ALL AMERICA SELECTIONS" ARE MADE

"ALL AMERICA SELECTIONS" are the choice of the Nation's leading horticultural judges, as being the most worthy new varieties introduced each year. They include species from around the World, imported and planted in twelve different localities in the United States, from whence they are judged. Their recommendations are authentic and dependable; your safeguard against ambiguous creations or claims. Novelties within our garden walls intrigue us, for they tax our keenest anxiety in expectation of unrevealed new beauties—and we pride ourselves of keeping in with the modern touch.

WHY THE MYSTERY

Why Shouldn't You Know What Is in a Good Lawn Grass Seed Mixture Before You Buy It
You Should Know What You Are Buying

- FACT 1** The more Chewing's Fescue and Kentucky Blue Grass a mixture contains, the better the mixture.
- FACT 2** Both are Perennials and live indefinitely. However, they require two or three years to reach full maturity.
- FACT 3** Meanwhile they need quick-growing Red-Top and Rye Grass as nurse crops to shade them in their early growth.
- FACT 4** Your first year's lawn is mostly Red Top and Rye Grass.
- FACT 5** After a few years, Chewing's Fescue and Kentucky Blue Grass will be at their best; they form the permanent lawn.

BURNETT-SEEDSMEN'S "FORMULA NO. 1" is a NO. ONE

Lawn Grass Seed Mixture, because it is made up of 25% Chewing's Fescue—25% Kentucky Blue—25% Red Top—25% Rye Grass. Burnett-Seedsmen's "Formula No. 1" is a balanced mixture. Burnett-Seedsmen's "Formula No. 1" will grow in sun or shade.
1 lb. \$1.15; 5 lbs. \$5.25; 10 lbs. \$10.00; 25 lbs. \$24.75; 100 lbs. \$98.00 postpaid 1,000 miles.

Special Lawn Grass Seed Mixture

You sow and sow, and sow, when, providing the proper mixture, one sowing should be sufficient. With our **Special Lawn Grass Seed Mixture** you can sow a lawn with complete assurance of immediate results within 5 to 7 days which will become more beautiful with the ensuing months. Accurately compounded to include biennial and perennial, choice, re-cleaned grasses of highest germination. It contains no fillers; one pound will sow 200 sq. feet of surface. 1 lb. 90c; 5 lbs. \$4.40; 25 lbs. \$21.00; 100 lbs. \$80.00.

Shady Place Lawn Grass Seed Mixture

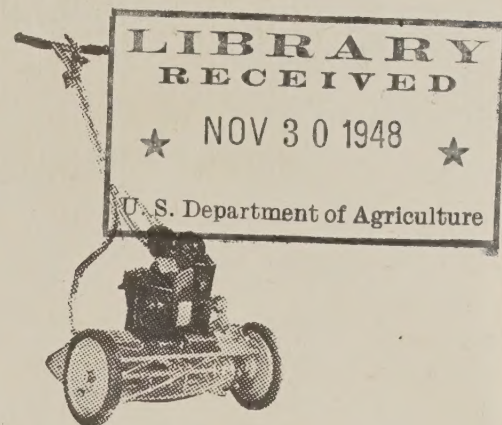

Certain grasses, like certain flowers, revel and flourish in the shade. By including sufficient quantities of the shade loving grasses along with commodious amounts of the choicest dwarf and creeping grasses, you may be assured of a successful lawn in the shade. Remember, in shaded situation where the sun's rays do not permeate sufficiently to dry the ground, a damp and acid condition exists. It is well to add lime before sowing. 1 lb. \$1.10; 5 lbs. \$5.00; 10 lbs. \$9.75; 25 lbs. \$24.25; 100 lbs. \$95.00.

About Your Lawn

SOW The Best GRASS SEED MIXTURES ON The Best SOILS Only

"The better the Lawn Grass Seed Mixture used, the better the lawn produced." That is true only if you bear this in mind, "The better the soil planted, the better the lawn produced." One without the other means a waste of time and money. Both requirements are necessary for a **permanent** lawn.

WHAT IS MEANT BY BETTER SOILS?

The deeper the top-soil (friable loam, a handful crumbles when palm is opened) the better the soil. The deeper the top-soil, the deeper will grass roots penetrate. The deeper the grass roots go into the ground, the better the chances of grass surviving Summer droughts. Clay soil or hard pan bakes after a rain preventing grass roots from breathing. Sandy soil is so porous, rain and moisture leach rapidly out of the ground. These two types of soil must be replaced or converted into loam, the deeper the better.

HOW TO CONVERT CLAY OR SANDY SOILS?

It takes time. The more patient you are, the more successful you will be. If you forego an entire growing season by planting a succession of cover crops you will not regret it. Rye, Winter Vetch, Soy Beans, Cow Peas and Crimson Clover are excellent cover crops. All except clover sow at the rate of 5 lbs. per 1000 sq. ft. clover, but 1 lb. per 1000. Rye seed produces an abundance of greens. The other four being legumes bring nitrogen into the soil by extracting it from the air. Start with Rye seed. Sow broadcast. Rake lightly and cover an inch or so of Peat Moss. After a few months when growth has reached a height of one foot or more, turn under. Be sure and bury the stalks as well as the roots. Spread Agrico Lawn fertilizer 25 lbs. to every 1000 sq. ft. Now sow any one of the other four crops, rake, cover with Peat Moss. When high enough turn under, fertilize. Repeat this process as often as desired. Remember the more crops planted and buried the deeper the top-soil becomes. You can stop the plantings when you reach either of the two best lawn seeding periods, September or April. For Fall planting use either Rye or Winter Vetch and spade under in the Spring. Only these two will winter over.

CLIPPER MOWER

IT CUTS . . . DANDELIONS, CRAB GRASS, PLANTAIN & HIGH & TOUGH GRASSES.

It Trims Around Shrubby, Trees, Flower Beds, and Hedges . . . Trims Edges of Walks and Driveways . . . Cuts along sides of Walls, Buildings and Fences.

It cuts where a hand mower won't.
It cuts what a hand mower cannot.
It does everything a hand mower does.
Eliminates sickles, shears and scythes. It is sturdy, safe, flexible and simple; nothing to get out of order. Made of cast aluminum, cast iron and carbon steel with rubber tires vulcanized to wheels.

15" \$27.50; 18" \$29.00; 21" \$30.50
prepaid 100 miles.

BEWARE IN BUYING TOP-SOIL

The best top-soils sold contain innumerable weed seeds. You won't notice them until the lawn comes up. Keep in mind, the cheapest lawn grass seed mixture does not contain weed seeds of Dandelion, Crab Grasses or Plantain. Weeds get into your lawn through top-soil, manure or are blown in. If you want to buy soil improving material, purchase Peat Moss, Humus, Cow Manure, Driconure or Bovung. These materials carry the least if any weed seeds. Only a few inches of improved top soil are insufficient to maintain a permanent lawn.

FINAL PREPARATIONS OF SOIL

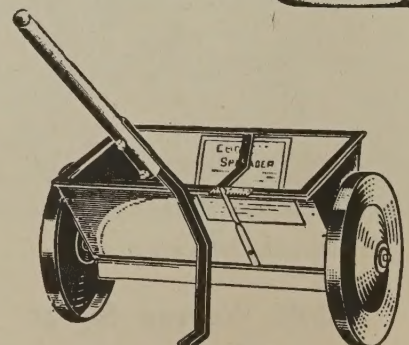

After turning under the last cover crop, allow a few weeks time for it to rot, and for the ground to set. Test soil for fertility deficiency by using a soil testing kit or mailing a sample to your state Agricultural Exper. Station. Add the recommended quantity and quality of fertilizer, and rake in thoroughly. Rake and roll the ground, being careful not to leave any depressions or gullies into which rain will accumulate and sour. Your last step is to rake smooth of stones and slope very slightly to allow excess rains to flow off.

SEEDING THE LAWN (1 lb. will sow 200 sq. ft.)

Using the handle of your rake as a marking stick, divide the area into several sections. In sowing each boxed section your eyes will be confined and not wandering which makes for more thorough sowing. If you use a fertilizer and grass seed spreader, this dividing is not necessary. After the entire area has been sown, rake lightly by drawing the rake towards you. Since raking is for the purpose of making ridges into which the seed drops and soil falls on top of it, be careful to not let the teeth of the rake go too deep into the soil. To do so, you would draw the soil away in spots leaving them unseeded. To avoid this, grasp the end of handle with the right hand and the underside of the middle of the rake with the left hand. This is the best method for covering the seed. Do not scatter soil over the seed. This method makes too uneven a covering. After raking, roll the ground lightly. If a roller is unavailable, lay a plant board on lawn and step on it or use a sod tamper. Rolling or tamping the seed is important. By so doing you pack the seed into the soil, eliminating all air pockets. This makes for better germination. The last step is to water the lawn with a fine sprinkler or nozzle unless you are fortunate to have a rain fall immediately after you have completed the job.

LATER CARE OF THE LAWN

When the first good growth of grass has appeared, do not cut it. Instead, roll it lightly. These grass seedlings in breaking through the ground push up the soil. Rolling repacks the soil. After a few days you can mow the lawn without danger of pulling out the grass. Any time you dig out a weed, be sure and sow a little grass seed in that spot. Keep the soil covered with grass at all times. Weeds are blown on your lawn daily by the thousands. Many of them sprout. If they cannot touch soil, they wilt away and die. There are many chemicals for killing weeds in lawns, Zotox, 2-4-D. Some report success with them. Top-dress your lawn twice a year; Spring and Fall, preferably before a rain.

Entirely different from other portable reels. This reel connects with faucet by means of patented leak-proof rotating coupling on the side of the reel. The water passes through this coupling into the hose on the reel, and, while the water is running, as much or as little hose as needed can be unreel. Sturdy, durable and well balanced. All metal construction. Triples life of hose... eliminates kinks and twists... no need to drag hose on the ground... no more soiled clothes. Holds 150 feet of hose. Can be assembled in five minutes.
